

HUSWELL TRADING VIRTUAL OFFICE

User Guide

Step-by-step instructions for the three user types available in the User Type dropdown.

This is a text-only guide. It covers General Manager, Sales Executive, and Sales & Pricing Officer workflows.

Guide version: Current interface reference

Prepared: 11 September 2026

Application: Huswell Virtual Office

CONTENTS

How to use this guide

Start with the shared sign-in instructions, then go to the section that matches the User Type shown for the account.

1. Shared sign-in and workspace basics
2. General Manager
3. Sales Executive
4. Sales & Pricing Officer
5. Shared statuses, handoffs, and document rules
6. Troubleshooting and safe working practices

Important: The website is role-sensitive. If a button, menu item, record, or approval action is not visible, the account does not have access to that action or record. Do not use another person's login.

Sign in and use the workspace

- 1 Open the Huswell Virtual Office website.
- 2 Enter the email address assigned to the account.
- 3 Enter the password. Use the eye control if you need to check what was entered.
- 4 Select **Sign in**. The website opens the workspace for the selected User Type.
- 5 Wait for the records to load before starting an action.

Move around the website

- Use the left sidebar to change screens. On a phone, open the menu button first.
- The active menu item is highlighted. Menu names may be shortened, such as **KPI**, **Production**, or **Approval Center**.
- Use search boxes, month selectors, status tabs, and officer filters to reduce a long list.
- Tables can scroll horizontally on smaller screens. Read the row before selecting an action.
- Many actions open a confirmation dialog. Read it carefully before deleting, rejecting, reversing, or un-submitting a request.

Profile and sign out

- 1 Open **Profile** from the sidebar or select the initials/account control when it is available.
- 2 Select **Edit Profile**, update the full name or email, and enter a new password only if needed.
- 3 Select **Save Changes**, then select **Confirm** in the confirmation dialog.
- 4 To leave the website, select **Sign out**, then confirm.

PDF and policy documents: The website opens PDFs in a new browser tab. If nothing opens, allow pop-ups for the website and try again.

Review the business and approve requests

The General Manager oversees leads, quotations, costing, projects, finance, business settings, and policy. Use the Approval Center for requests that require a decision.

Review the KPI dashboard

- 1 Open **Dashboard** or **KPI** from the sidebar.
- 2 Choose the month or reporting period. Allow the cards and lists to finish loading.
- 3 Review sales, collections, receivables, overdue amounts, quota, leads, and quotation counts.
- 4 Select a related list or screen when you need to investigate a total. Use the same month and officer filters when comparing records.
- 5 Open the underlying lead, quotation, payment, or project before taking follow-up action.

Create and manage generated leads

- 1 Open **Leads**. Use the generated-leads view if the page offers more than one lead mode.
- 2 Select **Add Lead** or the equivalent create action.
- 3 Enter the date recorded, client name, contact person, company, email, phone or social contact, date contacted, and outbound method.
- 4 Set the lead status and, when applicable, the current Done Deal stage. Assign the responsible Sales Executive or officer.
- 5 Save the lead, then search for it again to confirm the assignment and status.
- 6 To correct a record, open the row and select edit. To remove a lead, read the confirmation carefully: deletion is permanent and can remove related records.

Lead statuses

Potential client / Prospect New client Paying / Repeat client Loyal / Long-term client Inactive / Dormant client
Referral client Lost client VIP / High-value client

Use the status that describes the customer relationship. A Done Deal stage is separate and describes progress through the quotation and production journey.

Process the Approval Center

- 1 Open **Approvals** or **Approval Center**. The badge shows pending work when available.
- 2 Choose a queue: **All Pending**, **Price Quotations**, **Mockup Quotations**, **Quotation Revisions**, **Costing Breakdowns**, **Costing Revisions**, **Production Requests**, **Project Revisions**, **Project Completion**, **Project Edits**, **Lead Changes**, or **Other**.
- 3 Filter by search term, month, or officer. Open the record rather than deciding from a shortened table row.
- 4 For a quotation, inspect the client, finished products, quantities, internal costing, totals, VAT, terms, bank details, and attached proofs or references.
- 5 Select **Approve** when the request is complete and correct. Select **Return for revision** when a correction is required, and write a clear instruction describing what must change.

- 6 For simple one-click requests, use the approval or rejection action only after confirming the row. Detailed quotation and costing reviews must be handled individually.
- 7 Refresh or revisit the queue to confirm that the status changed and that the submitting user can see the next step.

02 · GENERAL MANAGER CONTINUED

Monitor quotations, projects, finance, and settings

Monitor quotations and projects

- 1 Open **Price Quotations**, **Mockups**, or **Quotation Costing Overview**.
- 2 Use status tabs, search, month, and officer filters to find pending, revised, approved, or completed work.
- 3 Open the quotation or mockup to review the PDF, signed proof, payment records, and approval history that are available.
- 4 Open **Projects** to switch between **Active** and **Completed**, then check due dates, percentage, remarks, proofs, and assigned officer.
- 5 Use the Approval Center for schedule revisions or completion requests. Do not mark a project complete only because a target date has passed.

Maintain pricing and business settings

- 1 Open **Settings**. Use the pricing or business-profile area that is visible to the account.
- 2 For internal pricing defaults, select **Pricing Defaults - Internal**, review the default markup categories, and select **Add markup** or **Edit pricing defaults**.
- 3 Save only values that have been approved as the company's standard. These defaults apply to new internal costings; existing quotations keep their saved values.
- 4 Review markup visibility controls when available. A hidden internal value should not be copied into customer-facing text.
- 5 Review the default bank details and business profile name, legal name, address, phone, and email. These values are used for new quotations and business documents.
- 6 After saving, open a new draft or return to the settings page to confirm the saved value. Do not change a default to repair an old quotation.

Care with defaults: A settings change can affect future quotations and documents for the organization. Confirm the intended value before saving.

Publish announcements and policy documents

- 1 Open **Announcements & Policy** or **Policy**.
- 2 Read existing items first so a new notice does not duplicate or contradict an active policy.
- 3 If the account shows management controls, select the add or edit action, enter a clear title and message, and save.
- 4 To attach a policy PDF, use the policy-document upload control, wait for the upload to finish, and open the document once to confirm it is readable.

- 5 To remove an outdated item or document, confirm that it is no longer needed before selecting delete.

Review finance and reports

- 1 Open **Finance** and set the **From** and **To** dates.
- 2 Review the totals for receivables, payables, cash flow, expenses, and other displayed metrics.
- 3 Open the supporting section when you need to inspect individual entries or supplier balances.
- 4 Select **Export CSV** for a spreadsheet copy or **Print report** for a printable report. Check the selected date range before exporting.
- 5 Compare unusual totals against the related quotation, payment, expense, or cash-flow record before requesting a correction.

Manage leads and prepare a Price Quotation

The Sales Executive owns the customer-facing preparation flow. Submit complete information so the Sales & Pricing Officer and General Manager can review it without avoidable corrections.

Work with a lead

- 1 Open **Leads** and search for the customer before creating a duplicate.
- 2 Select **Add Lead** when the customer is new. Enter the contact details, date recorded, date contacted, outbound method, relationship status, and assigned officer.
- 3 Save the lead, then open it again to confirm the name, contact method, status, and ownership.
- 4 When the customer progresses, update the lead status and the Done Deal stage. If the lead is lost, enter the reason requested by the form.
- 5 For an existing lead, select edit, make the smallest necessary change, and submit the change request when the website asks for General Manager approval.
- 6 Use **My Lead Change Requests** to check whether the request is pending, approved, or returned for correction.

Ownership matters: Lead changes and deletions may require General Manager approval. Do not create a second lead to avoid an approval request.

Create a Price Quotation draft

- 1 Open **Price Quotations** and select the lead that will receive the quotation. Use an existing eligible lead instead of starting from an unrelated customer.
- 2 Select the project type: **Premium Rigid Box, Regular Rigid Box, Corrugated, Offset, Digital, Mock Up, or Large Format Printing**, as applicable.
- 3 Add each finished product. Enter a clear product description and the required quantity. Repeat until every line is represented.
- 4 Attach illustration or PDF references only when they help the reviewer understand the request. The form allows up to five references, with the file limit shown by the website.
- 5 Review the customer, project type, descriptions, quantities, references, terms, and bank details that appear in the draft.
- 6 Select **Save Draft** if information is still being collected. A draft is not yet available for approval.
- 7 When the draft is complete, select **Submit for Review** and confirm. The quotation is routed to the assigned Sales & Pricing Officer and later to the General Manager as required.

Track a quotation and respond to revisions

- 1 Use the quotation status tabs: Draft Pending Review Needs Revision Approved .
- 2 If a pending draft must be corrected before review, use the available **Unsubmit** action, confirm, edit, and submit again.
- 3 If the quotation is marked **Needs Revision**, open the review note, correct every requested item, and save. Saving an edited needs-revision quotation sends it back for review when the website indicates that behavior.

- 4 When approved, open the quotation to view or print the customer-facing PDF. Illustration references are for review and are not automatically included in the PDF.
- 5 If another Sales Executive must receive a read-only copy, use the endorsement action and select the recipient. The endorsed copy is an immutable PDF copy of the approved quotation.

03 · SALES EXECUTIVE CONTINUED

Payments, Mockup Quotations, and production requests

Submit a payment receipt for an approved quotation

- 1 Open the approved Price Quotation and select **View quotation payments**.
- 2 Review the quotation total, payment terms, verified amount, and remaining balance before adding a receipt.
- 3 Select the option to add a payment or receipt. Choose the payment terms, payment method or type, amount, payment date, and reference number requested by the form.
- 4 Attach a clear receipt image if required. Use the file types and size limit shown by the website.
- 5 Submit the receipt once. It remains pending until the assigned reviewer verifies it.
- 6 Return to the payment list to check whether it is pending, verified, rejected, or needs attention. If rejected, read the review note before submitting a corrected receipt.

Request a Mockup Quotation

- 1 Open **Mockup Quotation** or **Mockups**, then select **Request Mockup Quotation**.
- 2 Select the approved Price Quotation that the mockup belongs to.
- 3 Enter the mockup descriptions and quantities. These lines are maintained for the mockup request and should be checked independently from the original quotation.
- 4 Select **Save Draft** while details are being prepared. Reopen the draft and check every line.
- 5 Select **Submit for Review** when complete.
- 6 Track the tabs Draft Pending Review Needs Revision GM Review Approved .
- 7 When returned, read the note, correct the draft, and resubmit. When approved, use the available PDF, print, signed-proof, and payment actions.

Request production

- 1 Open **Production** or **Projects**, then select **Request Production**.
- 2 Select the approved Price Quotation and the approved linked Mockup Quotation.
- 3 Attach or select the signed proof for the Price Quotation and the signed proof for the Mockup Quotation. Check that the proofs are the final approved versions.
- 4 Enter the start date and due date. Check that the schedule is realistic before sending it for approval.
- 5 Submit the production request and monitor its status in the project list.
- 6 For an active project, update the percentage and remark when progress changes, then save.

- 7 Use **Request project schedule revision** when the due date must change. Use **Request project completion** only after the work is complete and the required proof or note is ready.
- 8 Check **My Project Edit Requests** if a change to project details needs General Manager approval.

Review quotations and prepare costing

This user type combines its own sales preparation with assigned pricing review. Keep those responsibilities separate: a quotation you prepare follows the normal submission flow, while a quotation assigned for review must be costed and sent to the General Manager.

Open the review queue

- 1 Open **Price Quotation Review**. The queue can separate Price Quotations from Mockup Quotations.
- 2 Choose **Awaiting Review** for new work or **GM Revisions** for items returned with General Manager instructions.
- 3 Use search, month, and **New** or **Revised** filters to find the assignment.
- 4 Open the record and confirm that its project type is one assigned to the account. Review the customer, products, quantities, references, and preparer before entering costing.

Enter internal product costing

- 1 For each finished product, add one internal costing table. Do not combine separate products into one costing when their materials or quantities differ.
- 2 Add cost lines with a clear description. Use quantity multiplied by unit cost when the cost scales with quantity.
- 3 Use the **Fixed** option for a single fixed amount that should not be multiplied by the product quantity.
- 4 Check every cost-line quantity, unit cost, fixed amount, discount, markup, and VAT value that the form allows you to edit.
- 5 Review the calculated direct cost, markup, discount, VAT, and selling total. Compare the result with the quotation terms and approved pricing policy.
- 6 Save the costing, reopen it, and confirm that the values were retained before submitting.
- 7 Select **Submit to GM** or the equivalent review action. A quotation remains in the review process until the General Manager approves it.

Read-only values: Some internal markup or VAT values may be controlled by General Manager defaults. If a value is visible but not editable, do not work around the control; note the issue and use the revision process.

Handle a costing revision

- 1 Open **Quotation Costing Overview** or the **GM Revisions** queue.
- 2 Read the complete General Manager instruction before editing any line.
- 3 Correct the requested product, cost line, quantity, discount, markup, VAT, or terms. Do not remove an unrelated line merely to make the total match.
- 4 Save, recalculate, and compare the new total with the instruction.
- 5 Select **Resubmit**, then check that the item moved back to the awaiting-management state.

Verify quotation payments

- 1 From an approved quotation, open **View quotation payments**.

- 2 Check the payment terms, receipt, amount, date, and reference against the record.
- 3 Select **Verify** when the receipt is valid and the amount is correct.
- 4 Select **Reject** and write a specific note when the receipt is incomplete or incorrect.
- 5 Use **Undo verification** only when a verified payment must be corrected and the confirmation explains the consequence.
- 6 If the receipt was submitted by the same account that must review it, follow the management-exception path shown by the website instead of approving your own receipt.

04 · SALES & PRICING OFFICER CONTINUED

Manage your own work and handoffs

- 1 Use **Leads** to create or update customer records. Follow the Sales Executive lead steps in this guide for fields, statuses, and change requests.
- 2 Use **Price Quotations** to prepare your own quote. A quote that you prepare still needs the normal review and General Manager approval path.
- 3 Use **Mockups** to prepare a mockup request linked to an approved Price Quotation. Keep preparation work separate from the review queue.
- 4 Use **Projects** to request production, update progress, or request a schedule change when the required approvals and signed proofs are available.
- 5 Use **Policy** to read current announcements and documents.
- 6 Return to **Price Quotation Review** after completing preparation work so assigned review items are not left waiting.

Two queues, two responsibilities: The review badge is for work assigned to the account. Personal drafts and submissions are tracked in the normal quotation or mockup screens.

Statuses, handoffs, and document rules

Done Deal stages

Use the stage that describes the customer's current point in the workflow:

Use the correct handoff

When you finish	Next action	What the next user type needs
Lead details are complete	Save or submit the lead change.	Customer identity, contact details, owner, status, and next stage.
Price Quotation is ready	Submit for review.	Correct project type, product descriptions, quantities, references, terms, and bank details.
Internal costing is ready	Submit to the General Manager.	One costing per finished product, clear cost lines, calculations, markup, discount, VAT, and total.
Mockup is approved	Request production when proofs and dates are ready.	Approved quote, approved mockup, signed proofs, start date, and due date.
Payment receipt is submitted	Wait for verification.	Readable receipt, amount, date, method, and reference.
Production is active	Update progress or request a schedule/completion decision.	Current percentage, concise remark, and supporting proof where required.

Document and upload rules

- Use clear file names that identify the customer or quotation without putting passwords or confidential credentials in the name.
- Use the file type and size limits shown in the upload control. Wait for the upload confirmation before closing a dialog.
- Open an uploaded proof or PDF once to confirm that it is the intended document and can be read.
- Customer-facing PDFs show approved quotation information. Internal illustration references and costing details are not automatically customer-facing.
- Keep signed proofs tied to the correct approved quotation or mockup. Do not reuse a proof from another project.

When something does not look right

A menu or button is missing

Confirm that the account is signed in with the intended User Type and that the correct screen is open. If the action is still missing, ask the General Manager; do not use another person's login.

A list is empty

Clear search, check the month and status filters, and confirm that the record belongs to the account or assignment. Wait for loading to finish before concluding that no records exist.

A quotation cannot be submitted

Check required customer fields, project type, product descriptions, quantities, and references. If it is in revision, read the reviewer note and resolve each request before resubmitting.

A total looks wrong

Recheck quantity versus fixed cost, unit cost, discount, markup, VAT, and the saved quotation values. Do not change a company default to repair one existing quotation.

A PDF or policy document does not open

Allow pop-ups for the website, select the document again, and check that the browser has not blocked a new tab. If the file still fails, report the quotation or policy title and User Type used.

A save appears not to work

Check the required fields and error message, then wait for the success message. Search for the record before trying again so a slow save does not create a duplicate.

Safe working checklist

- ☐ I checked that I am using the correct User Type and record.
- ☐ I reviewed the customer, project, amount, dates, and status before saving.
- ☐ I submitted only after the draft was complete.
- ☐ I read the revision or rejection note before making a correction.
- ☐ I confirmed the new status after the action finished.
- ☐ I did not create a duplicate to avoid an approval or review step.

End of guide. This document is a text-only operational reference for the three User Type options in the current account form. Menu names and available actions are role-sensitive; follow the controls visible in the website and ask the General Manager when a workflow or permission is unclear.
